Sales Performance Analysis formulas applied

DAX Calculations

1. Calculated Table – EastRegionOrders

Creates a separate table containing only orders from the East region.

```
EastRegionOrders = FILTER(SalesData,SalesData[Region] = "East")
```

2. Calculated Column – ProfitCostDifference

Calculates the difference between Profit and Cost.

```
ProfitCostDifference = SalesData[Profit] - SalesData[Cost]
```

3. Measure – TotalProfit

Calculates the total profit from all sales records.

```
TotalProfit = SUM(SalesData[Profit])
```
